Indoor Wall Mountable Repeater

# RD622 *i*SERIES

- DMR & Analog Auto Switching
- 3 in 1 Integrated Repeater: RF, Power Supply, & Optional Duplexer

## RD622 iSERIES

An indoor DMR and Analog dual mode repeater in a compact design, embedded with a power supply and optional mini duplexer. Its innovative design enables it to easily support wall-mount installation with AC/DC power. Multiple sites can connect via IP along with the RD982i to support flexible wide area and large building coverage. Integration with Hytera Dispatch System or other 3rd party GPS dispatching software can be achieved by the RJ45 port in the side of the repeater.

# Product Features

- All-In-One Compact Design**  
Compact design, integrates RF, power supply, and optional duplexer into one box, which makes the RD622i smaller, lighter, and easier for wall-mount installation and indoor coverage (wall-mount bracket sold separately BRK21).
- Multi CTCSS / CDCSS Decode**  
Decoding up to a maximum of 16 CDCSS/CTCSS codes in Analog channels allowing coverage for different Analog voice users from various groups.
- Repeater Access Management**  
A repeater access control feature allowing better security to prevent unauthorized users from accessing the radio network.
- Analog Scan**  
Analog voice and signaling scan, allowing coverage of different analog voice users from various groups.
- AC / DC Auto Switch**  
The integrated power supply provides float charging for a backup battery. If the AC power fails, the DC power (battery) automatically takes over without interruption.
- Interoperability**  
Two repeaters can be interconnected to provide interoperability between UHF and VHF. A single repeater can auto switch between Analog and Digital mode, allowing for efficient frequency sharing between Analog and Digital users and an easy digital migration.
- Digital Audio Streaming of Dual Time Slots**  
The streaming of both the voice slots via the rear port accessory pins, allowing for capability expansion via future development and recording of communications via Hytera Dispatch System. See example below.
- Repeater Diagnostic And Control (RDAC)**  
Remote IP connection to monitor, diagnose, and control the repeater thus increasing maintenance efficiency. The Hytera developed RDAC is able to support multiple master network connections to allow the radio administrator to monitor multiple radio networks.
- Multiple Sites via IP**  
Network connection via the IP port of the repeater to form a private radio network to meet data and voice communication needs for wide-area coverage and dispersed locations. See example below.
- Over-the-air Signaling Encryption**  
For secure communications, RD982i supports over-the-air encryption to protect the signaling frames of both voice and data services.
- Out-of-range Notification**  
A radio is always notified when it has left the repeater coverage. The users can realize if they are in the talk range all the time by paying attention to the alert tone.

Slot 1 is used for voice call 1, Slot 2 is used for voice call 2
